

Minecraft

- [Installing the Modpack](#)
- [World Snapshots](#)

Installing the Modpack

For the best experience, its highly recommended you use the Prism launcher which can be downloaded [here](#).

- Open up the Prism Launcher and click "Add Instance"
- Set the "Name" field as whatever you would like
- Click on the "Import" tab and enter use

<https://bookstack.michaelrayson.com/attachments/1> as the direct download link

Do not highlight the link as Bookstack will provide you a perma link to this page. Just right click the link and select "copy link" from the context menu.

- Launch the instance, the server should be already populated in the Multiplayer menu. If not, the server IP is **michaelrayson.com:36677**

Updating the Modpack

Once you've created the instance, if an update is pushed for the modpack you simply:

- Right click the instance > "edit"
- Select the Modrinth tab and enter the url
<https://bookstack.michaelrayson.com/attachments/1>
- Click update modpack

World Snapshots

World Snapshots will be uploaded when the server has reached its conclusion with a link to the associated modpack needed to run the world.
